

ALLEGIANT[®] MAX

ROLLBACK SAFETY REFLECTORS

Enhanced rear warning
when visibility matters most

Rollback Safety Reflectors direct LED warning light toward rear approaching traffic to improve visibility, give drivers more time to react, and help reduce collision risk for both operators and motorists.

Without Rollback Safety Reflectors

Rear LED warning lights can lose effectiveness during recovery when light is directed down toward the roadway instead of towards approaching drivers.

With Rollback Safety Reflectors

Rollback Safety Reflectors direct LED light across a wider vertical angle, helping rear approaching drivers to recognize and respond to recovery operations earlier.

Improved Visibility

Strategically positioned Rollback Safety Reflectors spread LED warning light across a wider vertical angle, improving visibility for drivers at varying distances and heights.

Early Recognition

Helps drivers recognize recovery operations sooner by maintaining critical rear warning visibility, reducing risk for both operators and approaching traffic.

Operator Protection

Enhances driver awareness and creates a safer recovery zone around tow truck operators, vehicles, and equipment.
